

Project Title:

HimalayaInsight: Market Opportunity & Decision Intelligence Engine for Craft & Eco-Tourism MSMEs

Business Problem:

Handloom artisans and eco-tourism enterprises in Uttarakhand often operate with limited access to structured market intelligence. Business decisions regarding pricing, product development, customer targeting, and service offerings are frequently based on intuition rather than evidence-based insights.

This project aims to develop an AI-assisted Business Intelligence framework that analyses customer ratings, product performance indicators, and consumer preference patterns to identify high-potential market opportunities and support strategic decision-making for rural MSMEs.

Target Audience:

- Handloom artisan collectives
- Eco-tourism and homestay operators
- MSME founders and entrepreneurs
- Rural business development organizations
- Startup incubators and policy stakeholders
- Marketing and business strategy teams

Dataset Identified:

Dataset Name: Retail Product Market Analysis Dataset

Source: Kaggle

Approximate Records: 2,452 rows

Key Columns:

- Product
- Product_Brand
- Item_Category
- Subcategory_1
- Subcategory_2
- Item_Rating
- Selling_Price
- Date

Why this dataset?

Although not specific to Uttarakhand, the dataset provides real-world consumer preferences, pricing, category segmentation, and product rating information that can be used to simulate how rural enterprises can leverage business intelligence for market opportunity identification and decision-making.

Key Business Questions:

1. Which product categories and subcategories consistently receive the highest customer ratings?

This will help identify consumer preferences and potential product categories that rural MSMEs should prioritize.

2. How do product pricing and customer ratings influence each other across different market segments?

This will reveal opportunities for premium positioning and value-based pricing strategies.

3. Which categories demonstrate the strongest market potential based on customer satisfaction and pricing trends?

This will help businesses identify high-growth opportunities and optimize their product portfolio.

Proposed Tool Stack:

Data Processing & Analysis:

- Python
- Pandas
- NumPy

Data Visualization:

- Matplotlib
- Seaborn

AI-Assisted Intelligence Layer:

- ChatGPT
- Gemini

Documentation & Reporting:

- Google Colab
- Microsoft Word

Expected Capstone Output:

The final deliverable will be an AI-assisted Business Intelligence report that identifies market opportunities, customer preference patterns, and pricing insights relevant to rural MSMEs. Based on data-driven findings, the report will provide strategic recommendations that can help handloom artisans and eco-tourism enterprises improve market positioning, enhance customer value, and make more informed business decisions.
